

GLOBAL AI ATTITUDES REPORT: 2025

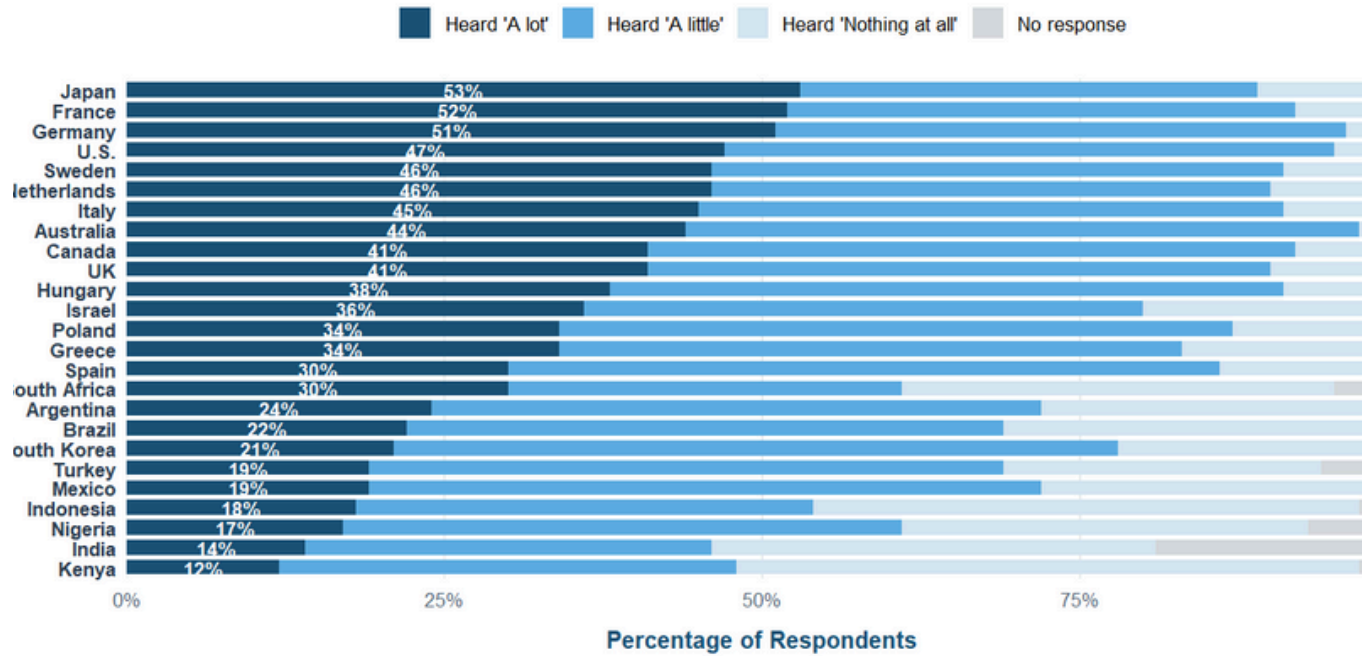

Prepared by: Ramazan Karagöz-Department of Statistics, Eskişehir Technical University

1. GLOBAL AWARENESS

The Global AI Awareness Divide

How much have people heard about Artificial Intelligence?
Countries sorted by 'Heard a lot' percentage (highest to lowest)

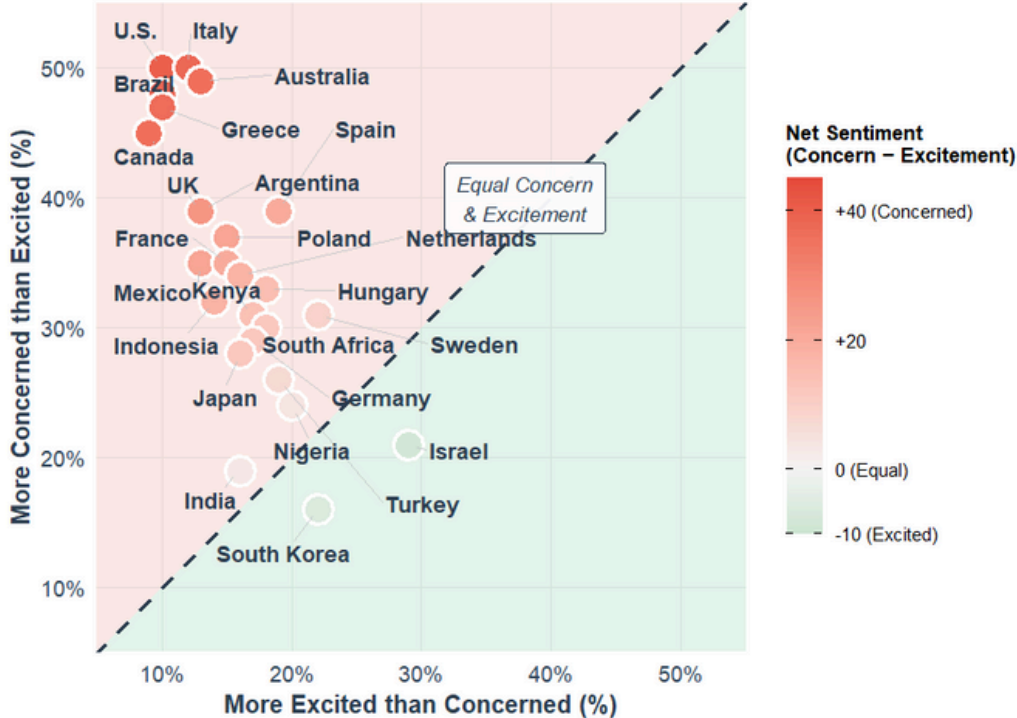

Source: Pew Research Center, Spring 2025 Global Attitudes Survey

2. SENTIMENT PARADOX

The Sentiment Spectrum: Fear vs. Hope

Countries above the dashed line have more concerned citizens than excited ones

Source: Pew Research Center, Spring 2025 Global Attitudes Survey

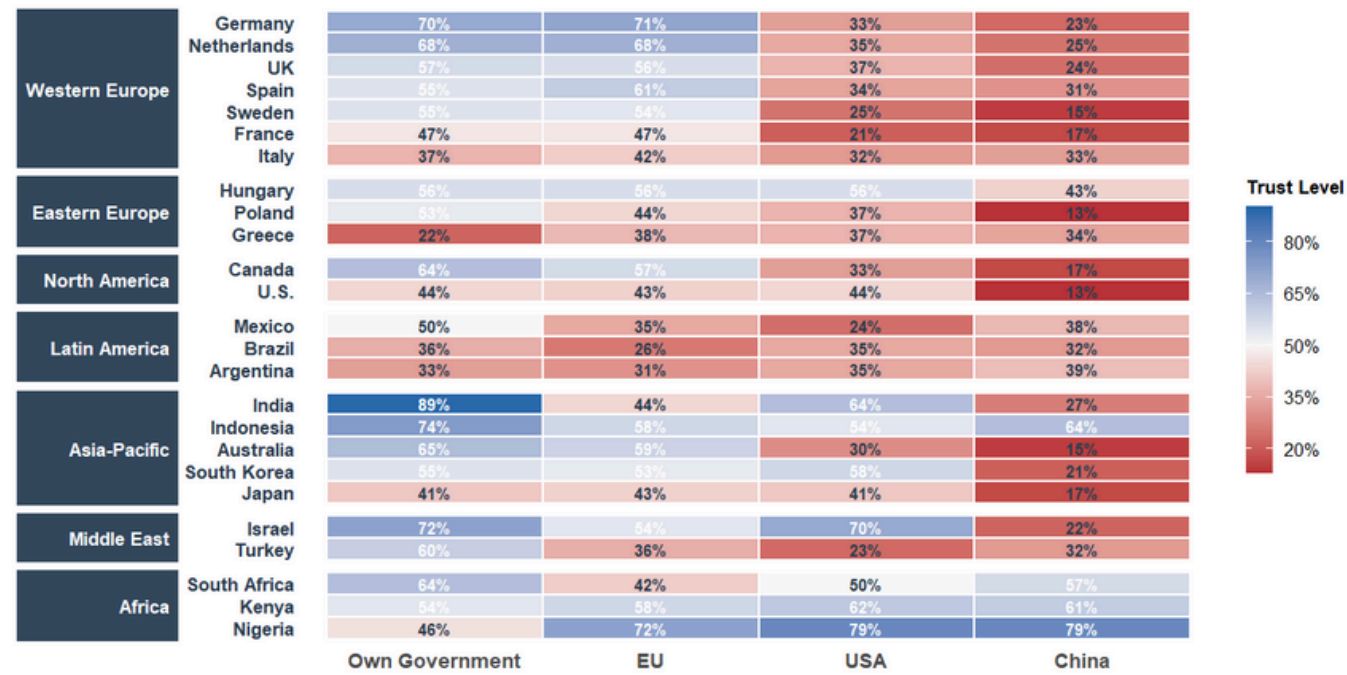

A sharp contrast exists between developed economies and the Global South. While Western nations like the UK and U.S. show high familiarity, emerging markets like Kenya and India lag significantly behind in AI literacy.

Does knowing AI make us love it? Surprisingly, no. Advanced economies cluster in the 'Concerned' zone (upper-left). South Korea and India are outliers, showing rare optimism compared to Western skepticism.

3. GEOPOLITICAL TRUST

The Geopolitics of AI Trust

Who do people trust to regulate AI responsibly?

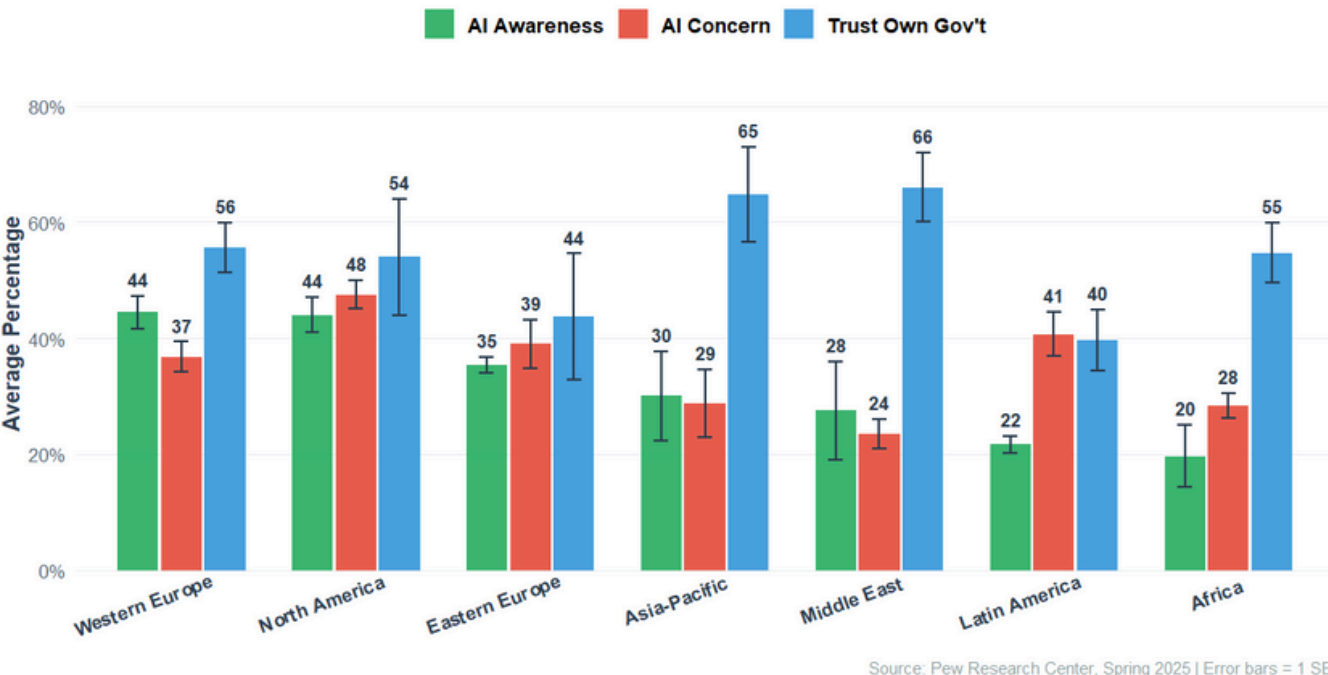

Source: Pew Research Center, Spring 2025 Global Attitudes Survey

Trust is local. Citizens overwhelmingly trust their own governments (Blue columns). However, a geopolitical fracture is visible: Western nations distrust China (Red), while Nigeria trusts both global powers equally.

4. REGIONAL VARIANCE

Regional AI Perception at a Glance

Mean scores with standard error bars | Regions sorted by AI Awareness (highest to lowest)

Source: Pew Research Center, Spring 2025 | Error bars = 1 SE

Error bars reveal the hidden story. Wide variance in North America indicates polarized internal views (high disagreement), while Western Europe shows consistent consensus (short bars) on AI sentiment.

Key Takeaways & Methodology

- Awareness Gap: Access to AI discourse is not evenly distributed globally; billions are left behind.
- Anxiety Trap: Higher technological familiarity currently correlates with higher anxiety, not comfort.
- Data Source: Pew Research Center, Spring 2025 Global Attitudes Survey (n=25,000+).
- Analysis: Visualized using R (ggplot2) to highlight statistical significance and regional variance.
