Milestone 1: Project Proposal

Talha Onur Erkol

2026-10-25

Project Theme: UN SDG 13 (Climate Action) & SDG 7 (Affordable and Clean Energy)
Proposed Topic: The Growth of Renewable Electricity Generation in Türkiye

1. Introduction

Renewable energy plays an important role in the transition toward a more sustainable electricity system. Solar, wind, and hydropower can help diversify electricity generation and reduce dependence on fossil fuels. This project investigates the development of renewable electricity generation in Türkiye and examines changes in solar, wind, and hydropower generation over time.

2. Research Questions

- How has renewable electricity generation in Türkiye changed over time?
- How have solar, wind, and hydropower generation developed?
- What do these trends suggest about Sustainable Development Goals 7 and 13?

3. Sustainable Development Goals

- **SDG 7 (Affordable and Clean Energy):** Focuses on access to affordable, reliable, sustainable, and modern energy.
- **SDG 13 (Climate Action):** Calls for action to address climate change and its impacts.

The development of renewable electricity generation is relevant to both goals.

4. Data and Methodology

The dataset contains annual electricity generation data by energy source for Türkiye. The analysis focuses on solar, wind, and hydropower generation. The data will be examined using time-series visualizations and comparisons between energy sources.
